Paddle Cell

The **paddle cell** plating lab tool operates in a rack configuration with substrates aligned vertically. The main feature of the system is the paddle unit, which moves in a short distance parallel to the substrate surface to create specific and very uniform flow conditions. The benchtop system fits into standard exhausts.

Basic scope

 Paddle cell, tank volume 15-25l, anode, wafer holder

Accessories

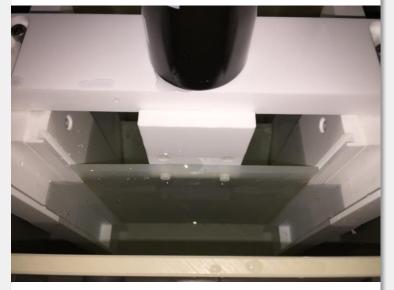

- Temperature control
- pH-control

Applications

 Electroplating of NiFe, Cu, Au, Sn or Ag on semiconductor substrates

Advantages

- Very uniform flow conditions
- Modular design

Paddle unit moving vertically for homogeneous flow conditions
