Bremen,

July 2024

Declaration of Conformity to RoHS (2011/65/EU, annex IV 2014/16/EU and annex II 2015/863/EU)

NB Technologies GmbH confirms that the concentration limits as defined in the RoHS directive are not exceeded, derived from the fact that no raw materials regulated under this directive are used in our fabrication or contained in our products by purpose.

From our suppliers we receive no other educts than declared to fully comply with the RoHS directive. If the conformity is not met, our suppliers will be obliged to notify us immediately. As soon as we identify that one of our products needs to be notified according to article 33, we will forward this information to our customers without prompting.

Basing on the foregoing statements fabricated films from our plating products can be considered to be conformal to the RoHS directive.

This conformation is valid only as long as users do not add other raw materials than provided by NB Technologies GmbH and no soluble anodes are used, which contain regulated contents under RoHS.

Additional analyses for RoHS-regulated contents in fabricated films derived from our plating products are performed for individual products on regular basis.

Sincerely,

NB Technologies GmbH
